

PRESS RELEASE

Successful launch at CeBIT Australia

Sydney, New South Wales – May 3rd 2016 – CeBIT welcomed huge crowds on the opening day with a range of entrepreneurs, business and government officials making their way to Sydney's Olympic Park for the technology showcase. AKIPS also celebrated the successful launch of their Network Monitoring Software in the Australian marketplace, following success in international markets.

CEO Paul Koch stated “CeBIT was selected as the event for AKIPS to be showcased within the Asia-Pacific region due to its reputation as the largest, vendor neutral, business technology solutions event”.

AKIPS empowers IT network engineers, across all industries, with the network visibility to allow them to be better equipped to investigate, troubleshoot and fix performance issues, ensuring the IT infrastructure underpinning your business is running effectively. With its innovative technology in terms of scalability (1 million plus devices), coverage (multi vendor across over 1200 MIB objects) and engineered optimised performance (allowing AKIPS to be run from a virtual machine {VM}), couple with a business model that offers AKIPS Network Monitoring Software on a low cost annual subscription basis, AKIPS is well equipped for success in the Network Monitoring Solution (NMS) marketplace.

In today's internet of everything world, with the dependence on digital data, and the mere fact no business can operate without an effective Information technology base, makes a compelling case for deploying a network performance monitoring tool, such as AKIPS. To ensure you have an evidence based, near real time, key performance indicator status for your IT network, why not trial AKIPS today.

AKIPS monitors any brand of equipment that correctly implements network communications protocols (i.e. Ping, SNMP, Syslog, Traps, Netflow). Performance data is available at 1 minute resolution, instantly historically searchable up to 3 years, with configurable alerting to allow tiered escalation of issues and faults that fall outside user configurable thresholds.

AKIPS is an innovative Australian company which engineers, designs and develops network monitoring software focused on user experience, speed, and scalability. AKIPS runs from a single virtual machine on customer premises, automatically discovers wired and wireless networks, identifying and monitoring vital metrics out-of-the-box for a hassle free deployment, using SNMPv3, IPv6, syslog, NetFlow/IPFIX, and more.
